

So you're looking to invest in a moon settlement? Well we've got you covered because we are proposing to make a moon settlement, named Alaskol.

Alaskol will be the best and safest moon settlement ever; it will have state of the art bio domes and will be a great investment for the future of your children.

Alaskol will generate an approximated 15% return on all investments, this means in 7 years you'll have regained everything you've put in.

Alaska also boasts mining opportunities; the lunar surface is full of titanium and other precious metals.

Once these
precious metals
have been
extracted they will
be sent to
Bellevistat to be
refined.
